

1. Business Background

Modern e-commerce businesses generate large volumes of transactional data every day. Business managers require timely access to key performance metrics to monitor sales performance, customer behavior, and product trends. Without a centralized analytics dashboard, decision-making becomes slower and increasingly dependent on manual reporting processes.

2. Business Problem

Business managers currently extract transactional data from multiple sources and manually compile reports in spreadsheets before analyzing revenue, orders, customer activity, and product performance. This manual reporting process is time-consuming, error-prone, and delays timely business decisions.

3. Stakeholder Needs

Stakeholder	Needs
CEO	Revenue, Growth, Executive KPI
Sales Manager	Orders, Revenue
Marketing	Customer Trend
Product Manager	Top Products
Operations Manager	Category Performance

4. KPI Definition

KPI	Business Purpose
Revenue	Monitor total sales revenue
Orders	Measure transaction volume
Average Order Value	Measure customer purchasing behavior
Top Products	Identify best-selling products
Monthly Revenue	Monitor business growth, track revenue trends over time
Sales by Category	Compare sales category performance
